

## CybraryN™ KB Article

### Locating files that are being downloaded to the CybraryN™ software workstation

#### Issue

There is a list of files that are downloaded to the CybraryN™ software workstation from the server. How can I locate these files?

#### Solution

1. Log in to a patron workstation PC.
2. Locate the **cybraryzac.dat** file, which can be found in the local TDMENU folder on each machine.
3. Open this file in Notepad to view a list of each file that is downloaded.
4. If the file is followed by a 1, the file is downloaded each time CybraryN™ software is restarted. If the file is followed by 0, it is only downloaded when a change has been made to it.
