### Computers no longer in use still appear in CybraryNet™ Software

#### Issue

Computers that are no longer on the floor still appear when using the CybraryNet™ Software.

#### Cause

The old computers are still in the **machine.dba** file.

#### Solution

1. Start the CybraryNet™ Software
2. Go to **File > Setup**.
3. Note your **CybraryN Patron System File Location**.
4. Exit CybraryNet™ software and then browse to your **CybraryN Patron System File Location**
5. Delete the **machine.dba** and **MachineN.dba** files.

After doing this, you will see that no computers appear in CybraryNet™. However, as the CybraryNet™ software is loaded and logged into on each PC, that particular computer will be added to a new machine.dba file that is created automatically. As each computer is added to the file, they will begin to re-appear in CybraryNet™ software and the old computers will no longer show up.
